## The easy, flexible and future-proof PBX telephone system built for SMBs.

### T500 PRO

The T500 PRO is the flexible enterprise-grade phone system ideal for small and medium businesses. Users choose from fixed-line, ISDN, VoIP and mobile connectivity options and can opt for a converged network or easily use the PBX with an existing system. It also supports a complete professional feature set and seamlessly integrates into a Unified Communications environment. Easy to set up and administrate, the T500 PRO is the perfect small business communication solution Made in Germany.

UP TO  
100 USERS

SUPPORTS UP  
TO 30 CALLS

INCLUDES 10  
USER LICENSES

UP TO 5  
PARALLEL  
CONFERENCES

UP TO 3  
PARALLEL VOICE  
RECORDINGS

### Feature highlights:

- Includes server license
- Fanless design
- Calls via internet, fixed line<sup>1</sup>, ISDN<sup>1</sup> and mobile
- Easy, cost-efficient web administration
- Fax server, voicemail with IVM
- CTI for data transfer between phone and PC
- Supports Windows®, MAC® and Linux® platforms
- Open Unified Communication Interface (UCI)
- Zero-touch phone installation
- Mobile client for iPhone® and BlackBerry®
- Free internal calls and uniform phone numbers

#### Expandability.

The T500 PRO connects businesses with multiple locations easily and quickly, thanks to its IP networking options. After two phone systems are connected via IP, the T500 PRO manages their certificate and information exchange.

#### Real time synchronization.

When a new location or phone is added, the connected T500 PRO PBX synchronizes in real time. Presence management is built in: busy lights on the telephone or softphone inform of a colleague's location and status.

#### Optimal customer service.

Location-based user groups with flexible overflow functions allow distributed switchboards, sales and marketing hotlines or support teams to become consolidated hotlines. No more busy signals or long queues – essential for top quality service.

#### Easy setup and administration.

The built-in setup wizards enable zero-touch installation so that newly added phones work in minutes. The intuitive web-based interface, drag & drop functions, and support of standard protocols make configuration of the telephone system extremely easy.
